

## UPDATE 29 APRIL: TEMPORARY COVID -19 MEASURE

As a result of the Corona crisis, the Dutch government has adopted a measure whereby the Ministry of Economic Affairs and Climate will be responsible for covering the fixed usage rate for a period of 8 months. As a result, during this period, the fixed usage rate component on the bill will be zero for the fiscal months of May through December. From May 1<sup>st</sup>, 2020 to December 31<sup>st</sup>, 2020, the rate for Pagabon is equal to the variable usage rate that applies to non-Pagabon customers. If the expectation of the period in which the measure applies is changed, WEB will inform accordingly.

### ELECTRICITY TARIFF FROM 1<sup>ST</sup> JANUARY 2020

#### Connections up till 3\*200 Ampere or up till 76.10 kVA

CATEGORY	CONNECTION CAPACITY	AMOUNT kVA (1) COMPUTING CAPACITY	FIXED USAGE RATE USD PER MONTH (2)			TEMPORARY RATE DURING CORONA MEASURE	VARIABLE USAGE RATE USD PER kWh (3)			TEMPORARY RATE DURING CORONA MEASURE

	t/m 3*35 Ampere	t/m 14 kVA	<b>1,589.87</b>	<b>40.00</b>

#### Explanation:

- For the categories 1\*25 Ampere up till 3\*63 Ampere the fixed values have been determined for the calculation of the fixed usage rate. The fixed rate for 3\*25 and 3\*35 Ampere are equated. For the categories 3\*80 Ampere and up the values are calculated based on the formula: (Ampere \* 220 Volt \* 1.73) / 1.000 (that is equal to the technical capacity);
- The height of the fixed usage rate per month depends on the size of the connection capacity and will be charged per connection. This rate is for coverage of the costs of the network;
- The variable rate will be charged for the actual usage (kWh);
- The discount is equal to the rate subsidy by the Ministry of Economic Affairs and Climate Policy. Based on the law subsidy can only be granted to lower the fixed usage rate and to lower the Pagabon rate;
- The Pagabon rate is the rate for electricity per kWh that is distributed on prepaid base and in which the costs for transport (the fixed usage rate) and the production of electricity (variable usage rate) are discounted into one variable rate. For new requests, Pagabon is possible for connections up to 3\*35 Ampere;
- For example connection of 3\*500 Ampere with 220 Volt: (500 \* 220 \* 1.73) / 1000 = 190.30 kVA;
- The gross rates are equal to the maximum rates as determined by the Authority for Consumers and Markets (ACM);
- The basic rate applies to connections with a maximum length of 25 meters. For excess length > 25 meters, a contribution based on pre-calculated project costs applies.

The above rates are visible on the invoices from February 2020 onwards (with a start date for consumption in January and an end date in February). For the January invoice, the rates as from July 1<sup>st</sup>, 2019 apply. For Pagabon based users, the new rates are immediately visible from January 1<sup>st</sup>, 2020.
